

Title: List of beaches returned to user based on location and preferences.

Description: After the user has created an account and/or has logged in they will have the ability to allow the app to use their current location, or input a location they want beach information on. The app then takes the current location or the inputted location and provides a selection of beach locations ordered by proximity and ranking by reviews. If a user puts in the location in an incorrect format such as a non-specific location or the query includes a typo the app will tell the user that no beach locations were found.
