Title: Allow for signed-in users to save beaches

Description: When a user is logged in, they can then access the feature to save a beach to their profile. When viewing a beach, a button appears called "save" which will then store the beach to the user. Access to a saved beaches page will now be visible or accessible and the user can now view the beaches they saved from pressing the save button. The saved beaches are now shown in a scrolled view. This feature acts similarly as a favorites beaches tab.
